

# CONTRACT WOLF

**Blockchain Security - Smart Contract Audits**

## **Security Assessment**

August 23, 2022

# Disclaimer

**ContractWolf.io** audits and reports should not be considered as a form of project's "advertisement" and does not cover any interaction and assessment from "project's contract" to "external contracts" such as Pancakeswap or similar.

**ContractWolf** does not provide any warranty on its released reports.

**ContractWolf** should not be used as a decision to invest into an audited project and is not affiliated nor partners to its audited contract projects.

**ContractWolf** provides transparent report to all its "clients" and to its "clients participants" and will not claim any guarantee of bug-free code within it's **SMART CONTRACT**.

**ContractWolf** presence is to analyze, audit and assess the client's smart contract's code.

Each company or projects should be liable to its security flaws and functionalities.

## Scope of Work

**Gempad's** team agreed and provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract.

The goal of this engagement was to identify if there is a possibility of security flaws in the implementation of the contract or system.

**ContractWolf** will be focusing on contract issues and functionalities along with the projects claims from smart contract to their website, whitepaper and repository which has been provided by **Gempad**.

# Description

TBA

# Risk Level Classification

Risk Level represents the classification or the probability that a certain function or threat that can exploit vulnerability and have an impact within the system or contract.

Risk Level is computed based on CVSS Version 3.0

Level	Value	Vulnerability
Critical	9 - 10	An Exposure that can affect the contract functions in several events that can risk and disrupt the contract
High	7 - 8.9	An Exposure that can affect the outcome when using the contract that can serve as an opening in manipulating the contract in an unwanted manner
Medium	4 - 6.9	An opening that could affect the outcome in executing the contract in a specific situation
Low	0.1 - 3.9	An opening but doesn't have an impact on the functionality of the contract
Informational	0	An opening that consists of information's but will not risk or affect the contract

# Auditing Approach

Every line of code along with its functionalities will undergo manual review to check its security issues, quality, and contract scope of inheritance. The manual review will be done by our team that will document any issues that there were discovered.

## Methodology

The auditing process follows a routine series of steps:

1. Code review that includes the following:

- Review of the specifications, sources, and instructions provided to ContractWolf to make sure we understand the size, scope, and functionality of the smart contract.
- Manual review of code, our team will have a process of reading the code line-by-line with the intention of identifying potential vulnerabilities and security flaws.

2. Testing and automated analysis that includes:

- Testing the smart contract functions with common test cases and scenarios, to ensure that it returns the expected results.

3. Best practices review, the team will review the contract with the aim to improve efficiency, effectiveness, clarifications, maintainability, security, and control within the smart contract.

4. Recommendations to help the project take steps to secure the smart contract.

# Used Code from other Frameworks/Smart Contracts (Direct Imports)

## Imported Packages

- Context
- IERC20
- IERC20Metadata
- Ownable
- ERC20
- IPancakeRouter01
- IPancakeRouter02
- IPancakePair
- IPancakeFactory
- IPancakeCaller
- StandardToken

## Description

Optimization enabled: Yes

Decimal: 18

## Capabilities

### Components

Version	Contracts	Libraries	Interfaces	Abstract
1.0	2	0	7	2

### Exposed Functions

Version	Public	Private	External	Internal
1.0	17	4	81	11

### State Variables

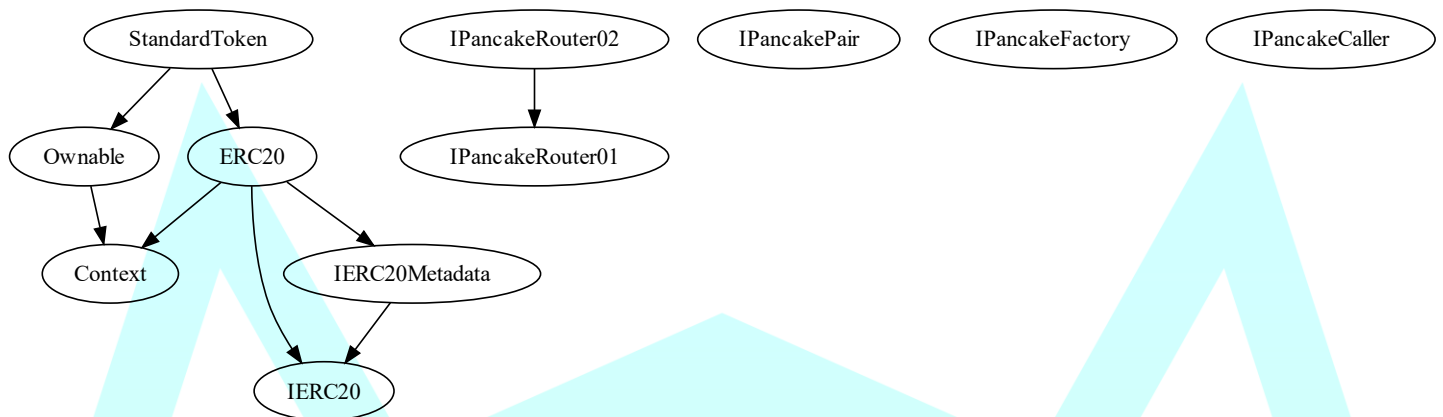

Version	Total	Public
1.0	27	17

### Capabilities

Version	Solidity Versions Observed	Experimental Features	Can Receive Funds	Uses Assembly	Has Destroyable Contracts
1.0	v0.8.13		Yes	No	No

# AUDIT PASSED

## Medium Issues

Unchecked return value from low-external call (SWC-104)	L: 682	StandardT Soken.sol	Resolved
---	--------	---------------------	----------

## Low Issues

A floating pragma is set (SWC-103)	L: 2	StandardToken.sol	Resolved
	L: 4	ERC20.sol Ownable.sol IERC20.sol IERC20Metadta.sol Context.sol	Acknowledged
State variable visibility is not set (SWC-108)	L: 370	StandardToken.sol	Resolved

# Function Comments

## Description: (Resolved)

Unchecked return value from low-level external call. (SWC-104)

```
address(marketingWallet).call{value: baseTokenForMarketing}("");
```

## Suggestion:

Adding a checker for the low-level external call

```
(bool success, /*bytes memory data*/ ) = address(marketingWallet).call{value : baseTokenForMarketing}("");  
require(success, "");
```

---

## Description:

A floating pragma is set (SWC-103)

```
pragma solidity ^0.8.0;
```

## Suggestion:

Specific version to ensure that the bytecode produced does not vary between builds.

```
pragma solidity 0.8.13;
```

---

## Description: (Resolved)

State variable visibility is not set (SWC-108)

```
bool inSwapAndLiquify;
```

## Suggestion:

Specify variables as **public**, **internal**, or **private**.

```
bool private inSwapAndLiquify;
```

# Audit Comments

- Owner can update max wallet amount
- Owner can update max transaction amount
- Owner can update total fees not greater than 30%
- Owner can renounce ownership
- Owner can transfer ownership
- Owner can update pancake pair address
- Owner can update pancake router address
- Owner can change liquidity pool wallet address
- Owner can change marketing wallet address
- Owner can change minimum amount to take fee greater than 0
- Owner can change and toggle automated market maker pair address
- Owner can exclude/include addresses from fees
- Owner can exclude/include addresses from max transaction amount
- Owner cannot mint after initial deployment
- Owner cannot burn
- Owner cannot block users
- Owner cannot pause
